DESIGN AND  
ENGINEERING AWARDS

## INNOVATIONS

IT TAKES A LOT  
OF THOUGHT TO  
MAKE THIS LIST

The 2014 CES **Innovations Design and Engineering Awards**, produced by CEA and culminating at CES, is one of the world's most distinguished award programs for the consumer electronics (CE) industry. Since 1976, this prestigious program has given consumer technology manufacturers and developers an opportunity to have their newest products judged by a preeminent panel of independent industrial designers, independent engineers and members of the trade press.

The awards encompass 29 product categories spanning the most influential and groundbreaking fields in the CE industry. This year, the Innovations Awards celebrate the addition of two new categories: 3D Printing & Additive Manufacturing and Wearable Technologies.

Each product is judged on engineering qualities, including technical specifications and materials used, the product's intended use/function and user value, aesthetic and design qualities, unique and novel features, and how the product's design and innovation directly compares to others in the marketplace. Products chosen as Innovations Honorees reflect these qualifications. Products chosen as Best of Innovations honorees represent an even higher standard of excellence, and are the top-scoring products in their respective categories.

The year's most outstanding developments in engineering and design will be featured at CES Unveiled LAS VEGAS: The Official Press Event of the International CES, on January 5, at Mandalay Bay, Level 3, South Seas Ballroom C, and within the 2014 CES Innovations Design and Engineering Showcase at The Venetian, Hall D, Booth 72063.
